Education

Manipal Institute Of Technology

B.Tech in Information Technology (2024–2028)

Manipal

CGPA: 7.35

Amity International School

Higher Secondary (Class XII) CBSE Board (2024)

Gurugram

90%

Narayana eTechno School

Secondary (Class X) CBSE Board (2022)

Gurugram

90%

Experience

Trainee, AI Engineering Intern

June 2025 – Present

EMB Global

Gurugram

- Architected and deployed production AI inference pipelines (LLMs, FastAPI) within distributed backend services, handling concurrent real-time user traffic.
- Engineered scalable, modular REST APIs connecting AI models to client-facing products, improving system reliability and cross-team integration speed.

Projects

Hisaab SmartPOS

[GitHub](#)

React, FastAPI, PostgreSQL, Supabase

- Architected a production-deployed, full-stack POS system end-to-end database schema, distributed API layer, and React frontend for real-time billing and inventory across multiple retail clients.
- Engineered a concurrency-safe checkout pipeline with atomic inventory deduction and barcode scanning, preventing race conditions during simultaneous transactions.
- Built an AI assistant for natural-language inventory queries and an OCR pipeline for invoice extraction, automating manual data entry and reducing processing overhead.

Nova AI

[GitHub](#)

React, FastAPI, OpenRouter API

- Designed a distributed client-server AI system translating natural language to executable SQL, architecting schema parsing, dynamic query generation, and persistent multi-session state.
- Built real-time result visualization with robust edge-case handling, validating reliability across diverse database schemas through systematic testing.

Hotel Management System

[GitHub](#)

Java, JavaFX, Maven

- Engineered a concurrent desktop booking system in Java (MVC, JavaFX) supporting simultaneous bookings, guest data, and financial workflows via multithreaded design and efficient in-memory data structures.
- Automated GST-based billing and built real-time revenue analytics with role-based access control, evaluating performance tradeoffs across data structure choices.

Personal Portfolio

[GitHub](#)

React, JavaScript, CSS

- Built a fully interactive retro desktop OS simulation in React with custom window management and a Dock, optimizing component architecture for rendering performance.

Technical Skills

Languages: Python, Java, JavaScript, SQL, C

Frontend: React, Next.js, Vite, HTML, CSS

Backend: FastAPI, Flask, REST APIs, JWT Authentication, RBAC

Databases: PostgreSQL, MySQL, SQLite, Supabase

AI & ML: LLMs, OpenRouter API, Gemini API, OCR, Prompt Engineering, Agentic Workflows

Tools: Git, GitHub, Docker, Postman, VS Code, Maven, Render, Vercel

CS Fundamentals: Data Structures & Algorithms, Concurrency & Multithreading, Distributed Systems, System Design, OOP, DBMS, Computer Networks

Volunteering

Organising Committee Member, Ops & HRD

Cultural Event (Revels), Manipal Institute of Technology

2025

- Contributed in database management for Revels, MIT Manipal's biggest annual cultural fest, coordinating logistics across multi-day operations.
